

Publish Package provides more efficient procurement and safer communication with stakeholders.

Publish Package Offers:

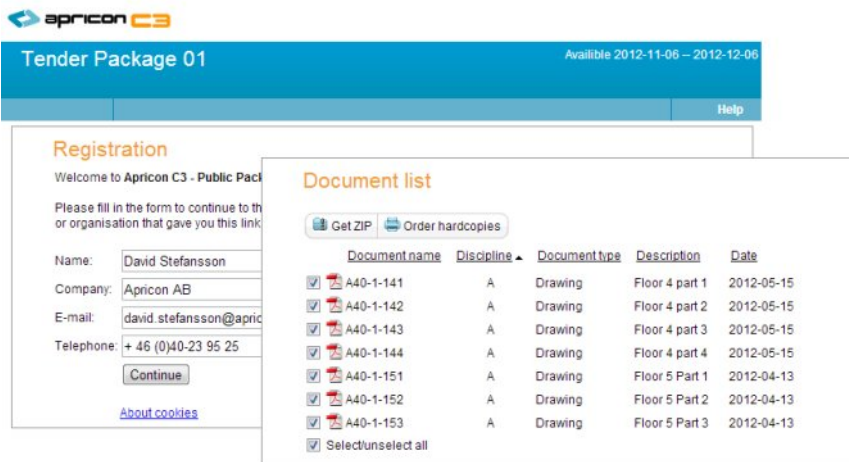

- > Hassel-free distribution of files to stakeholders outside of the system
- > The ability to distribute large files without wasting money on postage or using up any memory space
- > An automatic log that records who receives, views, and downloads information
- > Direct printing and downloading from published packages

Publish Package can be used for:

Tender Packages: Collect files and invite bidders via a link. Lock files to prevent future editing.

Design Packages: Put together documents for contractors easily. Display the latest version of the files automatically to ensure that correct information is being circulated.

Simplify the overall procurement and production process.

Tender Package 01 Available 2012-11-06 – 2012-12-06

Communicate

Apricon C3 Publish Package

Do not let extensive administration and large files stop you from sharing information! With Publish Package, you can quickly and easily prepare large quantities of documents inside Apricon C3 and distribute them securely to many stakeholders outside the project platform. This system allows you to more efficiently process tenders, while enabling contractors and consultants to gain access to information via a link.

Publish Package is safe and can be used for many purposes. Our customers have been pleased that through our system they have saved money, time and disk space!

Sounds interesting? Contact us today!

It is easy to create packages comprised of documents from different locations within the system. The information shared can be locked to prevent future editing or updated to the latest version automatically depending on the settings you choose. Local storage of files is unnecessary with the Publish Package system because information is available online through private links.
